Horizon 2020 projekt pod nazivom "PROFessional multi-disciplinary TRAining and Continuing development in skills for NZEB principles

<http://proftrac.eu/open-training-platform-for-nzeb-professionals.html>

jedan od partnera je i HKIS – Hrvatska komora inženjera strojarstva

ABOUT PROF / TRAC

PROF / TRAC will develop an Open Training and Qualification Platform for professionals dealing with nearly zero energy buildings.

PROF / TRAC in a nutshell

PROF / TRAC targets technical experts, architects and managers involved in NZEB design and construction. The developed European training and qualification scheme will be part of a life-long-life learning process for continuous development and up-skilling of professionals.

[View details >>](#)

TtT PROGRAMME

PROF/TRAC developed a European Train-the-Trainers (TtT) Program to facilitate the efficient use, adaptation and implementation of the EU level training materials, existing training structures, and certification schemes into national CPD programmes. The TtT program will also educate ambassadors of the PROF/TRAC scheme, who can initiate and organize the local training programs and can train the trainers on the national scale.

Milestones and outcomes

1. Mapping of the required skills and current skill gaps of professionals in NZEB
2. Development of an Open Training Platform and Qualification scheme
3. Train the Trainers programme for training provider REHVA and ACE members...

PROF / TRAC

Uspješan proces projektiranja, gradnje i obnove zgrada u cilju ispunjavanja zahtjeva za zgrade gotovo nulte energije (**G0EZ – nZEB**) zahtijeva **integralni pristup** projektiranju i rad u multidisciplinarnim timovima.

PROF-TRAC osigurava rješenje za prevladavanje prepreka takvom pristupu kroz razvoj i održavanje **otvorene edukacijske platforme** za obuku i trajno stručno usavršavanje profesionalaca u sektoru graditeljstva:

- inženjeri strojarske, elektro i građevinske struke
- arhitekti
- upravitelji zgrada i korisnici

Razvijena **Europska kvalifikacijska shema** biti će dio procesa cjeloživotnog učenja za trajni razvoj i usavršavanje profesionalaca.

ZAŠTO PROF / TRAC:

Prepreke kod gradnje i obnove nZEB (G0EZ)

- Nesklad između raspoloživih i potrebnih znanja i vještina kao i sposobnosti managementa profesionalaca zbog nedostatka specifične obuke i obrazovanja
- Mnogi profesionalci u sektoru graditeljstva imaju tek **ograničenu prethodnu obuku, znanja i vještine** o projektiranju energetski učinkovitih zgrada i nZEB principima.
- **Suradnja** među različitim strukama i profesionalcima u gradnji još uvijek **nije uobičajena**.
- Profesionalcima uključenim u graditeljstvo **nedostaju** prave **informacije o raspoloživim kvalifikacijama i materijalima** za obuku.
- **Ne postoje lista i pregled potrebnih vještina i raspoloživih kvalifikacija specifičnih ciljnih grupa.** Većina raspoloživih programa obuke fokusirana je na specifičnu ciljnu grupu i jednu tehniku ili koncept.
- **Materijali za obuku** (obrazovanje i naknadna obuka) kreiraju se **ad-hoc** bez konsenzusa o potrebnom baznom kvalifikacijskom okviru.
- **Materijali za obuku** (obrazovanje i naknadna obuka) su raspoloživi, ali **treba ih održavati i obnavljati** da bi obuka bila održiva i prikladna za cikluse cjeloživotnog učenja.

PROF / TRAC

Budva, Crna Gora, 22-23.09.2016.

energija+

HKIS

Četiri glavna cilja projekta PROF/TRAC

1. Mapiranje potrebnih i nedostajućih znanja profesionalaca o nZEB

To uključuje mapiranje i vrednovanje:

- Profesionalaca uključenih u gradnju i obnovu nZEB i usporedbu potrebnih s postojećim znanjima.
- Postojećih kvalifikacija, izvora znanja, obrazovnih programa, post inicijalnih obuka i struktura za akreditaciju.
- Za mapiranje nedostajućih znanja koristiti će se metodologija iz nacionalnih BuildUp programa.

2. Razvoj otvorene edukacijske platforme i metoda za sustavni i održiv pristup znanju

Srž projekta je razvoj lako dostupne otvorene edukacijske platforme sa sljedećim funkcionalnostima:

- Informacije o europskom programu obuke, trenerima i organizacijama koje provode obuku.
- Informacije o profilima profesionalaca za gradnju nZEB.
- Informacije o certificiranim profesionalcima.
- Europska platforma za učenje profesionalaca u graditeljstvu s online alatima za obuku.

3. Razvoj programa obuke trenera za razvijene kvalifikacijske sheme

Središnji program obuke trenera organiziran je na međunarodnoj razini od strane europskih krovnih organizacija koje predstavljaju profesionalce u sektoru graditeljstva: inženjere (REHVA), arhitekte (ACE) i upravitelje potvrđene od Housing Europe. PROF/TRAC će omogućiti masovno usavršavanje kroz obuku veće grupe „predvodnika” kako bi se kreirao efekt „grude snijega”.

4. Razvoj „skladišta” materijala za obuku koji će se koristiti u obrazovanju i post inicijalnom obrazovanju

Da bi akcije u okviru projekta PROF/TRAC bile održive, nakon isteka projekta na otvorenoj platformi biti će kreirano „skladište” u kojem će se spremati, održavati i obnavljati materijali za obuku.

PROF / TRAC

Budva, Crna Gora, 22-23.09.2016.

energija+

HKIS

Pristup projekta PROF/TRAC

Pristup je zasnovan na četiri temeljna stupa:

Korištenje uspješne strukture uspostavljene za **mapiranje postojećih i potrebnih kvalifikacija** i identifikaciju nedostajućih vještina.

Efikasno korištenje, adaptacija i implementacija postojeće infrastrukture **i materijala za obuku, te kvalifikacijskih programa** u cilju ostvarenja izravne i brze primjene.

Izravno uključivanje najvažnijih **Europskih krovnih organizacija za pojedine sektore** u cilju dobivanja široke EU podrške zainteresiranih profesionalnih grana i osiguranje održivosti nakon završetka projekta.

Brz i učinkovit početak **centralne obuke trenera radi stvaranja „ambasadora”** koji mogu inicirati i organizirati nacionalne programe obuke i obučiti trenere na nacionalnoj bazi u cilju kreiranja „**efekta snježne grude**”

Dosada su održana tri projektna sastanka: jedan u Bruxellesu, 23. i 24. ožujka 2015., drugi u Ljubljani 29. i 30. rujna 2015., a treći u Valenciji 8. i 9. ožujka 2016. Rad na „mapiranju“ priveden je kraju: popis institucija koje pružaju obuku u području gradnje gotovo nula energetskih zgrada, te vještina i znanja inženjera u tom području, kao i izrada planova provedbe obuka nakon završetka projekta. Održana je i prva obuka predavača u Pragu u veljači 2016. godine. Pripremljene su i provedene prve pilot obuke stručnjaka. U trajanju projekta će se u RH provesti jedna obuka trenera (rujan 2016.) i dvije pilot obuke od kojih je prva održana u srpnju 2016. godine.

Projekt se provodi kroz radne pakete, za koje su osnovni ciljevi sljedeći:

- Utvrđivanje potrebnih i nedostajućih znanja i vještina, te broja raspoloživih profesionalaca koji se bave s nZEB u državama iz kojih potječu članovi projektnog tima
- Uspostava otvorene platforme za obuku i način provedbe vrednovanja stečenih znanja
- Obuka trenera za definirane nastavne programe i kvalifikacijske sheme
- Provedba pilot obuka u državama iz kojih potječu partneri projekta
- Razvoj baze materijala za obuku za uporabu u edukaciji i cjeloživotnom obrazovanju
- Diseminacija i publikacija rezultata

Program obuke trenera - Train the Trainers Programme

PROF/TRAC organizira središnji 'Train the Trainers' program radi uspostave zajedničkog okvira i obuke „ambasadora“ projekta.

- Prva TtT obuka u Pragu, 15. – 17. veljače 2016.
- Druga TtT obuka u Zagrebu, 19. – 21. rujna 2016.
- Treća TtT obuka u Valenciji, proljeće 2017.
- Četvrta i peta obuka provesti će se u obliku webinara

Obučeni treneri (ambasadori) biti će osposobljeni za obuku profesionalaca i trenera na nacionalnoj razini.

Nakon TtT programa na EU razini, obučeni treneri s nacionalnim udruženjima koje provode obuku razvijaju i ostvaruju nacionalne pilot programe obuke bazirane na posebnim potrebama za nedostajućim znanjima i vještinama proizašlim iz mapiranja za pojedinu zemlju.

PROF / TRAC

energija+
Budva, Crna Gora, 22-23.09.2016.

HKIS

Hrvatska komora inženjera strojarstva
Croatian chamber of mechanical engineers

Pilot obuke

- Sedam pilot obuka u Danskoj, Nizozemskoj, Španjolskoj, Italiji, Češkoj, Sloveniji i Hrvatskoj
- Na prvoj TtT obuci u Pragu, treneri su kreirali specifične programe pilot obuka u skladu s potrebama proizašlim iz mapiranja za pojedinu zemlju. Naš program je baziran na iskazanom nedostatku vještina vezanih na timski rad i integralno projektiranje, te nedostatno specijalizirano znanje za projektiranje i gradnju nZEB zgrada

Zašto pilot obuke?

- Specifična uloga pilot obuke je praćenje i evaluacija pristupa projekta. Pilot obuke bi trebale rezultirati povratnom informacijom za poboljšanje programa obuke i materijala za obuku

Tko treba sudjelovati na pilot obukama?

- Inženjeri, arhitekti i upravitelji u zajedničkom radu

U zagrebu je, od 14.-16. 07. 2016. godine održana pilot obuka na kojoj je sudjelovao 31 polaznik (7 arhitekata, 7 strojara, 6 građevinara, 6 električara, 3 upravitelja zgrada i 2 predstavnika MGIPU)

Tijekom trajanja PROF/TRAC biti će provedena obuka i povećanje znanja i kompetencija sljedećih profesionalaca:

- 85 predavača će biti obučeni na centralnim obukama i predstavljati „ambasadore“ projekta
- 700 stručnjaka, (po 60 iz svake od 7 zemalja sudionica i 280 iz drugih država) će biti obučeno u pilot obukama koje će se provesti na nacionalnoj razini

U prvoj godini nakon završetka projekta planira se obuka dalnjih 770 stručnjaka (bez uračunatog broja onih koji će prisustvovati webinarima koji se također planiraju).

Jedan od zanimljivijih dovršenih projekata je IDES-EDU.

Po programu razvijenom u okviru IDES-EDU provoditi će se i tečajevi PROF/TRAC

IDES-EDU (Integral Sustainable Energy Design) projekt koji je proveden s namjerom edukacije i obuke studenata i profesionalaca s namjerom njihove specijalizacije u polju multidisciplinarnog projektiranja zgrada.

To je provedeno kroz više različitih koraka:

- Priprema nastavnog plana i programa treninga (prediplomski i poslijediplomski tečajevi) koji naglašavaju značaj zahtjeva za održivošću u kreiranju prostora građevina, uključivo nove metode učenja koje osposobljavaju studente i profesionalce za rad u okvirima multidisciplinarnosti i međusobne ovisnosti u rješavanju problema.
- Suradnja između studenata i profesionalaca uključenih u tečajeve, u cilju razmjene iskustava i uspostave zajedničkog pristupa i razumijevanja.
- Certifikacija i akreditacija tečajeva na nacionalnim razinama kao okvira za europsku certifikaciju sudionika, ali i zgrada projektiranih u multidisciplinarnim timovima.
- Inteligentno koncipiran dinamički i prilagodljivi nastavni portal koji će obrazovne materijale približiti europskim studentima i profesionalcima.
- Povećana svijest u Europi, unaprijeđenje primjene i posvećenost integralnom održivom projektiranju zgrada kroz promidžbene kampanje u graditeljstvu, kao i kroz razmjenu programa među sveučilištima.
- U IDES-EDU je sudjelovalo 15 obrazovnih institucija iz Europe razvijajući nastavne planove i za studente diplomske studije i profesionalce.

Croatian chamber of **mechanical engineers**

TARGET GROUP:

Architects, engineers (mechanical, electrical), building owners (managers)

NUMBER OF PARTICIPANTS:

Approximately 30

VENUE:

HKIS headquarters in Zagreb or one of Croatian Universities

DATE:

July, 14.-16. 2016.

INTERDISCIPLINARY APPROACH

Implemented, extends to be discussed and tuned up

PROF ✓ TRAC

Budva, Crna Gora, 22-23.09.2016.

energija+

HKIS

OBJECTIVE(S):

EPBD: the basic knowledge of the energy related EU directives related to nZEB
the knowledge of national regulations and calculations - application to nZEB

nZEB design issues – inserted after SWOT, to be discussed

WBREC: Developing ability to take part in a professional and interdisciplinary collaboration on design of whole building and renewable energy concepts. Developing ability to handle complex and research-oriented cases related to development of nZEB

IDA: Understanding the principals of how designers work and think, understanding the theoretical principal of different design approaches, understanding the procedure and having knowledge about the integrated way of thinking, understanding the principal of developing integrated design concepts

CDTW: Identifying the ways in which the teamwork problem shapes the design process and having ability to integrate basic issues into the teamwork design process, understanding cross-disciplinary networks in design process, understanding different approaches and working attitudes of designers, while maintaining one single set of final aims, understanding the principle of developing “a common” language for the design team.

Workshop: developing mutual understanding of nZEB principles within the working group on a practical example

Discussion and brainstorming : comparison, discussion and evaluation of produced results, conclusions on skill gaps

PROF ✓ TRAC

CONTENTS:

All training materials prepared according to IDES-EDU programme. Preliminary materials available as e-learning materials.

Whole Building and Renewable Energy Concepts

- **Lecture 1: Whole Building and Energy Solutions**
 - Introduction to the educational package including definition of future challenges to the building sector in relation to design and operation of very low energy buildings.
- **Lecture 2: Design Strategies for Reduction of Energy Demand**
 - Design considerations and application of a design strategy.
- **Lecture 3: Design Strategies for Utilization of Climatic Principles**
 - description of climatic design principles and strategies for utilization of passive energy technologies.
- **Lecture 4: Energy Use Control and Occupant Impact**
 - Occupant behavior and practices and their influence on building energy performance and indoor environment.
- **Lecture 5: Building Integrated Renewable Energy**
 - Examples and development stage of renewable energy solutions for buildings.
- **Lecture 6: Whole Building Design and Simulation Tools**
 - Building simulation and its role in the design process.
- **Lecture 7: Built Examples**
 - Description of a number of built examples worldwide to illustrate the building concepts and design strategies.
- **Seminar 1:** The aim of this seminar is to identify the factors related to climate, building layout and façade design that may have any influence to final energy performance
- **Seminar 2:** The aim of this seminar is to create a total energy concept of the building from the previous seminar to reach a net zero energy performance.

PROF / TRAC

Integrated Design Approach

- **Lecture 1: Introduction to Integrated Design Approaches**
 - Introduction to the overall concept of integrated design process (IDP) by lecture and video from
- **Lecture 2-3: Integrated Design Approaches in detail**
 - A selection of three methods of integrated design approaches is presented in detail
- **Lecture 4: Model for an Integrated Analysis of a Very Low Energy Buildings Life Cycle**
 - Very low energy buildings knowledge management models, theories and strategies are introduced.
- **Lecture 5: Introduction to design thinking vs. empirical analytical thinking (1)**
 - How designers [architects] work in practice and how that is different from empirical analytical thinking (positivistic thinking, engineering).
- **Lecture 6: Introduction to design thinking vs. empirical analytical thinking (2)**
 - Introduction to design thinking.
- **Workshops 1, 2, 3: Integrated Design Approaches in practise.**
 - The three workshops can take place parallel with the lectures and the module of cross-disciplinary teamwork. The workshops are performed in groups (containing different disciplines) where the students discuss different cases of existing buildings.

Croatian chamber of mechanical engineers

Understanding of the EPBD

- **Lecture 1: Climate targets, EU energy policy**
 - Global warming, CO₂ emission, general introduction
- **Lecture 2: EPBD – 91/2002/EC**
 - An integrated methodology to rate the energy performance of buildings
 - Minimum energy performance standards for new and existing buildings that undergo major renovation
 - Energy certificates for buildings
 - Regular inspections of boilers and air-conditioning systems
- **Lecture 3: Calculation of the energy performance of buildings**
 - ISO EN 13790 Energy performance of buildings – Calculation of energy use for space heating and cooling National calculation method
- **Lecture 4: Energy certification of buildings**
 - EN 15217 Energy performance of buildings – Methods for expressing energy performance and for energy certification of buildings
 - EN15671 Energy performance of buildings – Overall energy use and definition of energy ratings
- **Lecture 5: Inspection of heating and AC systems**
 - EN 15239 Ventilation for buildings – Energy performance of buildings – Guidelines for inspection of ventilation systems
 - EN 15240 Ventilation for buildings – Energy performance of buildings – Guidelines for inspection of air-conditioning systems
 - EN 15378 Heating systems in buildings – Inspection of boilers and heating systems
- **Lecture 6: EPBD recast – 2010/31/EU**
 - Cost-optimal minimum energy performance requirements

PROF / TRAC

Cross-disciplinary teamwork

- **Lecture 1: Introduction to cross-disciplinary Teamwork – Main cross -disciplinary issues**
 - Introduction to the main cross-disciplinary issues, mono-disciplinary, multi-disciplinary, inter-disciplinary, trans-disciplinary, cross-disciplinary, teamwork, common language, actors of the building process; investor, architect, developer, designers, users, decision-making process, hybrid organisations.
- **Lecture 2: Case Study Presentation**
 - The basic Architects and Developers expectations.
- **Lecture 3: Case Study Presentation**
 - Basic structural engineers and HVAC engineers expectations, structural engineers and HVAC engineers values and goals, structural engineers and HVAC engineer's needs, structural engineers and HVAC engineers expectations, structural engineers and HVAC engineers point of view, structural and HVAC technical aspects, structural engineers and HVAC engineers language.
- **Lecture 4: Cross – disciplinary networks – Teamwork**
 - Basics of teamwork, communication, information exchange, cross-disciplinary networks, team building, goal statement, social contract, roles, interaction, interpersonal and inter teams relations, coordination meetings.
- **Workshops & Follow-up discussion – Principles**
 - Principal participants are: Investor, Developer, Architect, Structural Engineer, HVAC Mechanical Engineer and User. Additional participants could be: Energy Consultant, Electrical Engineer, Fire Protection Manager, Construction Manager, Construction Supervisor, Facility Manager
 - One of the disciplines will be then appointed as a leader to solve the case for all disciplines.
 - Students will be given a suggestion of plan and description of the aims which should be fulfilled by the final product.
 - Since each of the students will present a different professional discipline, the approach to the final solution will be different.
 - As a team – students will have to reach one final solution.
 - Teacher should be available during the workshop to act as a mediator and negotiator between each profession represented.
- **Lecture 5: Summary of the Workshops & Follow-up discussion**
 - Summarising the issues presented on the Workshops. The various cross-disciplinary networks are presented in detail. That lecture will share experiences from existing cases and final reports showing different perspectives of understanding teamwork. Lecture will include following aspects: urban planning, architectural, technical, economics, sustainability & ecology, construction.

PROF / TRAC

PROF / TRAC

energija+

Budva, Crna Gora, 22-23.09.2016.

HKIS

Hrvatska komora inženjera strojarstva
Croatian chamber of mechanical engineers

Face – to – face training (lectures) 2 x 6 = 12 h

EPBD – Energy performance of Buildings: demands, approach, definitions related to nZEB

nZEB design issues – suitable volume and level

WBREC - Whole building and renewable energy concepts as design solutions where the building and its building construction elements together with building services and renewable energy systems are integrated into one system in order to reach an optimal environmental performance in terms of energy performance, resource consumption, ecological loadings and indoor environmental quality

IDA – integrated design approach

Cross disciplinary team work - CDTW

practical and theoretical understanding that each design process with the complex network of different designers requires creation of a certain “language”. In the sustainable design process each of the disciplines depends on each other – simultaneously and in cross-reference.

SELF LEARNING: within the course or before, during preparation?

PROF ✓ TRAC

energija+

HKIS

Hrvatska komora inženjera strojarstva
Croatian chamber of mechanical engineers

WORKSHOP 16 h

Six groups (5 participants each) containing representatives of all professions will be formed in order to define a preliminary design of a nZEB, based on earlier prepared templates and materials as a basis for work. Architects, engineers will be required to produce preliminary program and basic design in mutual coordination, and input from building managers will be expected as well. The attendees of one profession could teach the other attendees on the specific topic where the gap was found.

Discussion: discussion on workshop outcomes will be discussed within groups. Competitive approach.

OUTCOMES EXPECTED:

Assuming basic concepts of team work on nZEB.

Exchange of experience.

Mutual understanding and awareness of cross disciplinary team work on nZEB designs

Increased skills in nZEB design

TRAINING METHODS:

Preliminary preparation of attendees based on e-learning course materials prepared in advance by training provider.

Face – to face lectures.

Workshop with solving practical examples based on existing case studies. Discussion and brainstorming.

PROF ✓ TRAC

Budva, Crna Gora, 22-23.09.2016.

HKIS

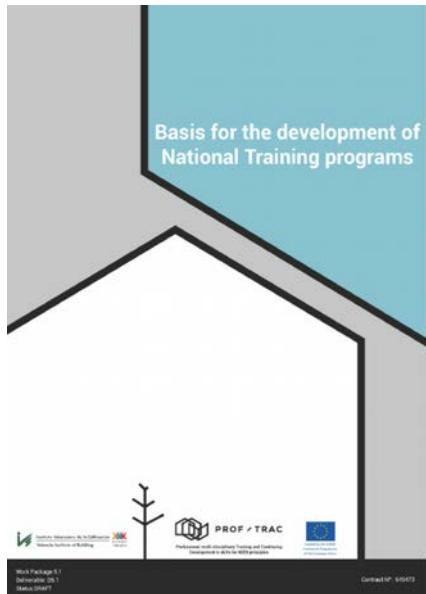

READING

REQUIRED: IDES EDU based materials prepared in advance by training provider

RECOMENDED: Materials from PROF/TRAC training material repository

FEEDBACK FROM SWOT SESSION

After the discussion during the SWOT analysis session we are considering implementation of nZEB design principles into the first part of lectures, after EPBD, slight decrease of the volume of other topics in order to maintain approximately the same number of hours for the entire course, and implement design issues into the reading materials for self education.

ANNEX 1. QUESTIONNAIRE QUALITY, FIELDS OF INTEREST

The training activity you have just attended has benefited from funding by the Horizon 2020 programme for ProfTrac project

We hope you have been satisfied with the quality of the training provided and would be very grateful if you would take of your time and fill in the attached Evaluation Questionnaire.

We suggest beneficiaries to collect participants' questionnaires at the end of the training activity and send all of them along with the final report.

YOUR OPINION IS RELEVANT TO US

It will provide us with valuable data, which we can help us provide and maintain a high-quality service, especially:

- Adapt the training activities on offer to the specific needs of European professionals
- Evaluate the impact of the training activities

Your comments and suggestions are a very important tool for us to develop new formulas of continuous training in the context of a construction industry.

CONFIDENTIALITY

We understand that you may have concerns about providing your personal information. We would like to assure you that your personal information is kept strictly confidential and is not used outside of the ProfTrac project under any condition. This information will be used only for survey quality control by the ProfTrac project for evaluation purposes.

Thank you for your cooperation!

Europski zakonodavni okvir

→ *Tri direktive kao paket mjera koje definiraju uvjete za značajno dugoročno poboljšanje energetskih svojstava Europskog stambenog fonda*

- značajno pooštreno u proteklih nekoliko godina:
 - preinaka Direktive o Energetskoj učinkovitosti zgrada (Energy Performance of Buildings) (EPBD, 2010/31/EU),
 - Direktiva o energetskoj učinkovitosti (EED, 2012/27/EU),
 - te u manjoj mjeri, Direktiva o obnovljivim izvorima energije (RED, 2009/28/EC).
- Države članice moraju izraditi nacionalne planove za povećanje broja zgrada gotovo nulte energije. Planovi uključuju:
 - Definiciju GOEZ sukladno nacionalnim/lokalnim uvjetima (u kWh/m²)
 - Ciljevi za nove zgrade od 2015.
 - Informacije, finansijske ili druge mjere usvojene za promidžbu GOEZ + detalji o korištenju obnovljive energije u novim i postojećim zgradama (veća rekonstrukcija)
 - Od 31.12.2020. sve nove zgrade trebaju biti GOEZ, a javne nakon 31.12.2018.

Tehnički propis o racionalnoj uporabi energije i toplinskoj zaštiti u zgradama (NN128/2015)

(ispunjeno izmjenama i dopunama NN 130/14)

Zgrada gotovo nulte energije jest zgrada koja ima vrlo visoka energetska svojstva. Ta gotovo nulta odnosno vrlo niska količina energije trebala bi se u vrlo značajnoj mjeri pokrivati energijom iz obnovljivih izvora, uključujući energiju iz obnovljivih izvora koja se proizvodi na zgradi ili u njezinoj blizini, a za koju su zahtjevi utvrđeni ovim propisom. Od 31. prosinca 2020. sve nove zgrade moraju biti »zgrade gotovo nulte energije«; a nakon 31. prosinca 2018. nove zgrade koje kao vlasnici koriste tijela javne vlasti moraju biti »zgrade gotovo nulte energije«.

Tablica 8. Najveće dopuštene vrijednosti za nove zgrade i zgrade gotovo nulte energije zgrade grijane i/ili hlađene na temperaturu 18 °C ili višu

Croatian chamber of mechanical engineers

Definicija zgrade gotovo nulte energije u RH primjenjuje se za nove zgrade prema sljedećim namjenama:

- višestambena
- obiteljska kuća
- uredska
- obrazovna
- bolnica
- hotel i restoran
- sportska dvorana
- trgovina
- ostale nestambene zgrade

Svojstva zgrada gotovo nulte energije određena su prema karakteristikama fonda utvrđenim za definiciju referentnih zgrada, uz optimizaciju geometrijskih karakteristika s ciljem postizanja što niže razine potrebne energije za zadovoljavanje energetskih potreba zgrada.

Zgrada gotovo nulte energije definirana je potrošnjom primarne energije za grijanje, hlađenje, ventilaciju, pripremu potrošne tople vode i rasvjetu, te minimalnim udjelom obnovljivih izvora energije u zadovoljavanju energetskih potreba zgrade.

Nacionalni plan povećanja broja zgrada gotovo nulte potrošnje energije

Hrvatska je kao članica Europske unije ispunila obvezu definiranja standarda zgrade koja je gotovo nula energetska. Ta je činjenica utvrđena u Bruxellesu na sastanku dionika na projektu CA EPBD (Usmjereni akcija za implementaciju Direktive o energetskim svojstvima zgrada - Concerted Action Energy Performance of Buildings Directive).

Hrvatska je standarde projektiranja i gradnje stambenih i nestambenih zgrada približno nulte energije te rokove do kojih ih je potrebno primjenjivati propisala izmjenama i dopunama Tehničkog propisa o racionalnoj uporabi energije i toplinskoj zaštiti u zgradama (NN 130/14).

MINISTARSTVO GRADITELJSTVA I PROSTORNOGA UREĐENJA

PLAN ZA POVEĆANJE BROJA ZGRADA GOTOV NULTE ENERGIJE DO 2020. GODINE

EU PROJEKT PROF-TRAC (Professional multi-disciplinary Training and Continuing Development in skills for NZEB principles - Multidisciplinarna izobrazba i trajno stručno usavršavanje profesionalaca u vještinama za zgrade približno nulte energije)

(04.05.2016)

[SHARE](#)

Hrvatska komora inženjera strojarstva je partner u EU projektu iz okvirnog programa za istraživanje i inovacije Horizont 2020 za razdoblje 2014-2020, pod nazivom PROF-TRAC (Professional multi-disciplinary Training and Continuing Development in skills for NZEB principles - Multidisciplinarna izobrazba i trajno stručno usavršavanje profesionalaca u vještinama za zgrade približno nulte energije).

Provđena projekta počela je 2015 godine i sada je u drugoj od tri planirane godine trajanja projekta.

Uspješan proces projektiranja, gradnje i obnove zgrada na način da udovolje zahtjevu približno nulte energije zahtjeva integralni pristup projektiranju i rad u multidisciplinarnim timovima. PROF-TRAC osigurava rješenje za prevladavane zapreke za takav pristup kroz razvoj i održavanje platforme za obuku i kontinuirano usavršavanje profesionalaca uključenih u taj proces.

Planira se da se ciljevi projekta ostvare kroz:
1. Mapiranje postojećih i potrebnih vještina svih profesionalaca koji se bave s NZEB.
