

The Bulgarian Green Building Council, the leading provider of green building education in Bulgaria, is now offering the first DGNB Consultant course offered in the region. Take this unique opportunity to learn from highly experienced DGNB internationally recognized experts and to position yourself internationally among green building professionals with the DGNB Certification System.

Become a DGNB Consultant. Register for DGNB certification system for sustainable buildings training offered in Bulgaria for the first time.

The DGNB Consultant training is organized for the first time in Bulgaria and is indispensable for everyone who plans sustainable buildings and supports the certification processes at an international level. You will learn how to implement the main principles of sustainability in your projects and you will have the possibility to consult projects by the DGNB system around the globe.

During the two phases of the course you will be introduced to the DGNB System, learn how it works and how to use it, and the many advantages of certification:

- Incorporation of all relevant sustainable building aspects in the planning and evaluation process
- Increased attractiveness of the building on the market
- Minimization of risks and construction costs
- Planning and process optimization
- Maximization of building quality and performance
- Higher rents

Registration includes:

- 4 day training course
- DGNB International trainers from the German Green Building Council
- Trainings are in English
- DGNB Consultant certificate valid globally
- Participation in the course requires specific professional qualifications - please contact the organizers at +35929641320

The DGNB building certification system was developed by the German Sustainable Building Council (DGNB) together with the German Ministry of Transport, Building and Urban Development. DGNB is one of the most influential organizations for sustainable constructions in Europe. The foundation of the DGNB system is thoroughly international and it integrates all of the important requirements imposed by EU legislation and standards. Furthermore, the comprehensive system can be easily adapted to the building culture in another country. It is one of the leading systems worldwide, mainly due to its comprehensive quality concept, which takes equal account of economics, ecology, and socio-cultural aspects and is based on a holistic view of the building's entire lifecycle.

In the first section of the course you will learn about the structure, methodology, criteria, and the evaluation process of the DGNB System.

In the second section you will learn about Life Cycle Assessment and Life Cycle Costs, as well as practical application of the criteria.

An online exam will be administered to test this knowledge. After successful completion of the training you will receive your certificate for DGNB Consultant.
